As Sustainable As Sustainable Gets

We Partner With Global Fashion Brands to Produce Fibers That Are at Least 50% Recycled and Have a Measurable Environmental Impact.
As Sustainable Gets

The textile industry places a heavy burden on our planet’s resources. We believe that there is a different way of doing things, one that reduces our industry’s environmental footprint and makes the most of the limited resources available. We want to avoid valuable, dyed cotton from going to waste. That is why we mechanically recycle the textile waste from the garment manufacturers in Bangladesh into new fibers and yarns, without using water, chemicals or dyes.

We are CYCLO® recycled fibers.
No dye, water or chemicals

The final product is a brand new, colored yarn, produced without using any dyes, water or chemicals. This makes CYCLO® recycled fibers one of the most environmentally friendly textile alternatives!
WE BELIEVE THAT THERE IS A DIFFERENT WAY OF DOING THINGS.
Analyze.

Develop.

Enhance & Learn

The CYCLO® System

CYCLO® has been developed specifically to provide a global standard for recycled yarn, which is preferred by major international apparel brands and in some cases, perceived as superior to virgin cotton because of the sustainability credentials.
Make it with CYCLO®

transforming

PRESERVING
From the moment textile waste is sourced and sorted to every process in between sustainable start to the finish, CYCLO® is dedicated to not only transforming waste but preserving natural resources. Simply put, we make yarn for a better planet. The most widely used products can be made with CYCLO® recycled yarn.

1kg of CYCLO® Recycled Fibers saves up to

- 6.5 kg of CO₂: 97% saving equivalent to 50 km driven
- 5,889 liters of water: 99.71% saving equivalent to 884 days of drinking water
- 6.39 MJ of energy: 84% saving equivalent to 4 hours 47 minutes of watching TV
- 5.873 m² of land used: 99.71% saving equivalent to 94 sheets of A4 paper
Truly Circular Supply Chain

- 97% less CO₂
- 99.71% less water
- 84% less energy
- 99.71% less land
The earth is like my mother. You get punished if you make a mess.

Why do you think this planet’s called Mother Earth?

JESSICA LEE
AGE 10 | HONG KONG
Textile production today is one of the most environmentally detrimental industries in the world. Producing yarns, fabrics and garments requires a tremendous amount of resources, and creates a lot of textile waste in the process.

We continue to invest in new technologies and developments to widen our range of applications, improve quality and bring innovation.

We collect the buyer’s waste from the manufacturer, recycle it, spin it into yarn, and deliver that yarn back to the manufacturer. The manufacturer then uses it to produce garments, ultimately recycling the buyer’s own waste.

SIMCO Spinning & Textile’s mission is to turn this waste into high quality fibers and yarns that can be used to create brand new garments, home textiles and accessories.

We’ve pioneered a closed-loop production system to upcycle pre-consumer textile waste. Recycled fibers, home as a brand new alternative to conventional raw materials.

We continue to invest in new technologies and developments to widen our range of applications and bring innovation.

We created CYCLO® Recycled Fibers as a brand to offer one of the most sustainable alternatives to conventional raw materials.
